

ArrayList< main.java.com.company.dijkstratest.
Vertex >

ArrayList< String >

vertices

adjacencies

main.java.com.company.dijkstratest.
Registration

```
classDiagram
    class Registration {
    }
    class ArrayListVertices["ArrayList< main.java.com.company.dijkstratest.Vertex >"]
    class ArrayListStrings["ArrayList< String >"]
    Registration --> ArrayListVertices : vertices
    Registration --> ArrayListStrings : adjacencies
```

The diagram illustrates a class named `main.java.com.company.dijkstratest.Registration` (shaded box) at the bottom. It has two associations (dashed purple arrows) pointing to `ArrayList` objects above it. The first association, labeled `vertices`, points to `ArrayList< main.java.com.company.dijkstratest.Vertex >`. The second association, labeled `adjacencies`, points to `ArrayList< String >`.
